ALIAS TARGET™

ALIAS ERGONOMICS: TOTAL ADJUSTABILITY TO A COMPETITIVE SHOOTER'S ANATOMY.

The ALIAS concept has its roots in a design that was introduced on the grueling high power competition field as the McMillan High Power Target rifle. Developed by Rock McMillan with input from world champion high power shooters, the design started as a clean sheet of paper and evolved into a cutting edge rifle that could meet the demands of literally the best shooters in the world.

Refined into today's ALIAS Target, the rifle has dominated high power competition around the globe.

The strength of the design lies in its superior ergonomics. Buttstock, cheekpiece, forend, sight position, trigger – almost every component of this rifle is fully adjustable so that a shooter can hold exactly the right position across the course of fire. What's more, the components are indexed so the

adjustments can be quickly repeated during a match. No matter how your body is built and what position you are shooting, this rifle will fit you.

Accuracy is truly world class. Out of the box, this rifle has won numerous high power and long range championship events, setting records in the process.

The ALIAS Target concept works.

Adjustable, match grade Anschutz® trigger.

Tubular forend with accessory rail rotates for perfect positioning.

Fully adjustable, detachable butt system.

Fast 1 millisecond lock time.

ALIAS SYSTEM

SWITCH BARREL DESIGN. SWITCH ACCESSORIES DESIGN. SWITCH *EVERYTHING* DESIGN.

Choose your ALIAS rifle in three different standard configurations, including the CS5 ultra-compact subsonic urban rifle, the STAR Standard Tactical Application Rifle, or the Target competition rifle.

Or mix and match components to build your own custom configuration.

The ALIAS system is one rifle with many identities. Customize yours today.

Full length picatinny sight mount rail.

A 20 MOA rail is optional for very long range shooting.

Fully adjustable, quick detach buttstock.

The detached stock mounts on the side of the action for storage and compact transport (excludes Target). The rifle can be fired in the broken-down configuration, if desired.

Stockless design increases accuracy.

With no stock or chassis to flex, the rifle is stiffer and barrel harmonics are better managed.

2 pistol grip options.

Fine tune the grip for shooter comfort.

2 buttstock options. Choose from tactical or competition configuration.

Anschutz® fully adjustable match trigger.

Adjustments include pull weight, length of pull, trigger shoe angle, single-stage and two-stage pull.

Uses detachable ten and twenty round magazines.

Fast one millisecond lock time is three times faster than a Winchester Model 70 for greater accuracy potential.

High speed, low effort bolt operation. Two helical cut cocking cams and a 75° bolt lift make the ALIAS action one of the smoothest bolt action designs ever built.

ALIAS SYSTEM

3 accessory rails to mount night vision and accessories (only on tactical tube forend).

Free floating, match grade barrel.
All barrels are stainless, premium grade for superior accuracy.

Switch barrel design.
Swap barrels in less than 5 minutes with the ALIAS barrel change kit.

3 forend options.
The forend can also be rotated for optimal ergonomics in any shooting position (excludes quad forend).

3 suppressor options.

No point of impact change after breakdown and reassembly.

FAST BREAK-DOWN FOR COMPACT CARRY.
